

PERCHLOROETHYLENE TECHNOLOGY

NEWS: November 17, 2014

Enex International announces completion of a Basic Engineering Design Package (BEDP) for a 12 kta Perchloroethylene Plant.

The innovative technology offers:

- Use of Carbon Tetrachloride as Raw Material
- Feedstock Flexibility
- Superior quality product
- Low capital cost
- Advantageous manufacturing costs
- Superior reaction and process control
- High Yield Efficiency
- Recovery / recycle of off-specification
- Thermal oxidation technology for vents processing
